1 Motivation and objectives

1 Motivation

2 Objectives

Motivation and objectives

Motivation

- Present technical work with a formal HCMUT visual identity.
- Keep slide content independent from the reusable theme.
- Make common academic elements easy to reuse.

Objective

Build a clean, readable presentation that compiles with one Typst command.

Example figure

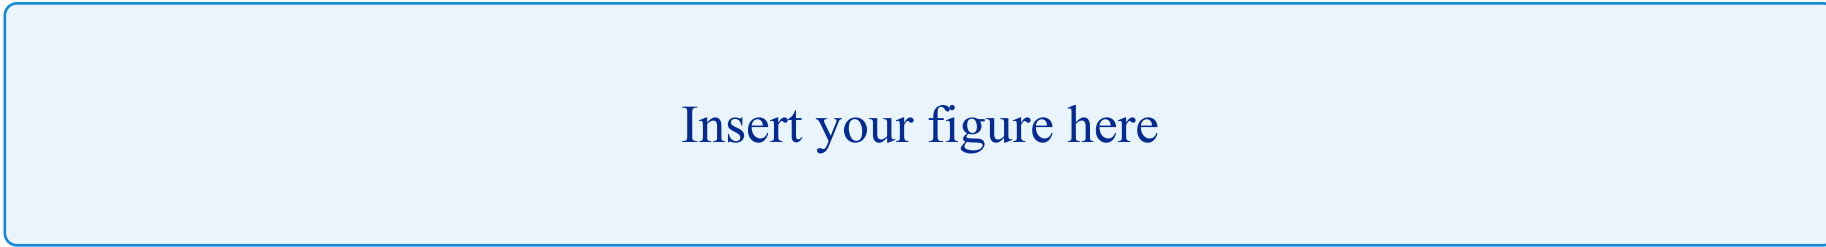

Figure 1: A figure placeholder with a native Typst caption.

Section Contents

2 Methodology

1 Workflow

2 Equations and citations

Methodology

Workflow

- 1. Define the problem and constraints.
- 2. Design the solution and evaluation method.
- 3. Measure results and discuss limitations.

Stage	Input	Output
Planning	Requirements	Experiment design
Execution	Data	Measurements
Analysis	Measurements	Findings

Equations and citations

The objective can be expressed as

$$f(x) = \sum_{i=1}^n w_i x_i$$

A bibliography entry can be cited directly with [1]; Typst reads the BibTeX file without a separate BibTeX or Biber command.

Example citation key: @knuth1984

3 Results and discussion

1 Results

Results and discussion

Results

Strengths

- Reusable slide primitives
- Consistent typography
- Single-command build

Limitations

- Replace placeholder figures
- Confirm fonts on the target machine
- Adapt content density to the defense

Section Contents

4 Conclusion

1 Takeaway

Conclusion

Takeaway

The template separates HCMUT styling from presentation content while keeping the editing workflow small and predictable.

Thank you
